

HydraStim™ Gold

Heatwaves pose a significant challenge to poultry farming, directly impacting the health and productivity of birds. Maintaining optimal electrolyte balance and support during periods of risk are crucial to minimizing economic losses during these extreme heat periods.

COMPOSITION:

Electrolytes:

Potassium chloride, potassium citrate, sodium chloride, magnesium chloride.

Potassium:	104,050mg
Sodium:	101,500mg
Magnesium:	6,133mg

ENERGY AND DIGESTIVE FUNCTION:

Liquid sorbitol, dextrose
Anhydrous betaine

FLAVOURING COMPOUNDS:

Ascorbic acid: 10 g/L
Green propolis
Curcumin (Curcuma longa extract)
Piperine (black pepper oleoresin extract)

DIRECTIONS FOR USE:

Broilers and layers: Distribute 500ml / 1000L in drinking water, starting early in the morning. Double the dose when temperatures exceed 30°C.

PACKAGING:

Available in 5L, 25L, 220L and 1000L IBC's. Other packaging sizes available upon request.

ELECTROLYTE BALANCE:

During heatwaves, urinary excretion of electrolytes negatively affects the electrolyte balance, leading to an imbalance in body fluids and significant water loss. The balanced composition of AgriVite HydraStim helps effectively compensate for these losses.

ENERGY AND DIGESTIVE FUNCTION:

As cells have twice the energy demands during heat stress, the dextrose in AgriVite HydraStim provides a rapidly available energy source. Betaine and sorbitol support liver function, enhancing overall energy metabolism.

ANTIOXIDANT POWER:

The specific flavouring compounds in AgriVite HydraStim provide a preventive and comprehensive action against the effects of heat stress in birds. Its broad spectrum antioxidant helps with chronic heat stress.
